GRAND ROUNDS LECTURE SERIES

December 3, 2019
8:00 AM

“Risk Stratification and Molecular Phenotyping of Preeclampsia: The utility of Microvesicle Proteins at the End of the First Trimester”

Learning Objectives:

a. Participants will be able to describe the role of circulating microparticles in predicting spontaneous preterm birth and preeclampsia.
b. Participants will identify the statistical and technical pitfalls of molecular risk stratification at the end of the first trimester.
c. Participants will assess the potential for the early molecular phenotyping of preeclampsia at the end of the first trimester.

Commercial Relationship disclosure: Speaker has none to disclose.
